                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                            New catalytic protein of telomerase of a higher animal and a gene coding it - useful for diagnosis of diseases caused by the change in activity of a telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing
                                                                                                                                                                                            The specification describes a human catalytic telomerase protein. The products are useful in drug compositions for the diagnosis of diseases caused by the change in activity of telomerase. The present sequence appears in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Human; telomerase reverse transcriptase; hTRT; TRT; diagnosis; prognosis; cell proliferation; cancer; ageing; ribonucleoprotein.

This invention describes novel human CRT-1 genes and their encoded proteins containing a reverse transcriptase motif, which act as telomerase inhibitors. The gene, its encoded protein and derived antibodies can be used to provide base sequence information, detect telomerase activity and cancer cells, and to screen telomerase inhibitors. The detection method is simple and effective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel gene, useful in detection of telomerase activity and cancer cells as well as screening telomerase inhibitors for treatment of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Human, telomerase reverse transcriptase, hTRT, TRT, diagnosis, prognosis, cell proliferation, cancer, ageing, ribonucleoprotein.

The gene, its encoded protein and derived antibodies can be used to provide base sequence information, detect telomerase activity and cancer cells, and to screen telomerase inhibitors. The detection method is simple and effective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   This invention describes novel human CRT-1 genes and their encoded
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Novel gene, useful in detection of telomerase activity and cancer cells as well as screening telomerase inhibitors for treatment of
                                                                                                                                                                                                                                                                                     CRT-1; reverse transcriptase; telomerase; inhibitor; detection; telomerase activity; cancer cell; screening; human.

                                                                                                                                                                                         Region
    The present sequence represents a fusion protein from an example of the present invention which describes human telomerase reverse transcriptases (hTRT). The present invention also describes the franscriptases (hTRT). The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant preparation of recombinant telomerase by contacting a protein preparation of recombinant telomerase RNA compound; (C) detection preparation of recombinant telomerase RNA component; (C) detection of probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample; and (B) increasing the proliferation of a vertebrate cell by increasing hTRT expression; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polymucleotide encoding the effect of ageing or cancer. Inhibitors of telomerase activity can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used to treat conditions that are associated with high telomerase activity. A protein preparation of hTRT can also be used in the new
                                                                                                                                                                                                                                                                                                                                                                                       Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Length 514;

```
The present sequence represents a fusion protein from an example of the present invention which describes human telomerase reverse transcriptase (hTRT). The present invention also describes the transcriptase (hTRT). The present invention also describes the chollowing methods: (A) determining whether a test compound is a modulator of hTRT, by determining whether a test compound is a modulator of hTRT, by determining the change in hTRT recombinant preparation of the compound; (B) preparation of trecombinant telomerase RNA component; (C) detection preparation of hTRT with a telomerase RNA component; (C) detection of the hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of probe to the sample and detecting the complex formed or in the sample; or amplification product with presence of hTRT in the sample; and (D) increasing the product with presence of hTRT in the sample; of hTRT expression; and (E) the use of an agent that causes an increasing cell vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of hTRT and the polynucleotide encoding considered to the defect of ageing or cancer. Inhibitors of telomerase activity can be used in the manufacture of medicaments for inhibiting the cueffect of ageing or cancer. Inhibitors of telomerase activity can be used in the manufacture of medicaments for inhibiting consideration of hTRT can also be used in the new and accordated with high telomerase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ;

                                                                                                                               ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present sequence is a human telomerase reverse transcriptase (hTRT) clone protein from the present invention. The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or polynucleotide, on administration of the compound; (B) preparation of recombinant telomerase by contecting a protein preparation of recombinant telomerase by contecting a protein of preparation of recombinant telomerase RNA component; (C) detection of the hTRT with a telomerase RNA component; (C) detection of the hTRT with a telomerase RNA component; (C) detection of amplifying the product and correlating the presence of complex or amplification product and correlating the presence of complex or amplification product with presence of HTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increase in cell correlated (B) the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibits ageing. A protein preparation of HTRT and the polynucleotide encoding hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing
                                                                                                                                                                              Human telomerase reverse transcriptase 63 kDa clone 712562 protein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 New catalytic protein of telomerase of a higher animal and a gene coding it - useful for diagnosis of diseases caused by the change in activity of a telomerase
                                                                                                                                                                                                        Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
used to treat conditions that are associated with high telomerase activity. A protein preparation of hTRT can also be used in the new methods.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present sequence represents a catalytic telomerase protein. The products are useful in drug compositions for the diagnosis of diseases caused by the change in activity of telomerase.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         ö
                                                                                                                                                                                                        ..

                                                                                                                                                                                                                                                                                                                                                                                  This sequence is a truncated human telomerase of the invention. Primers that amplify the telomerase coding sequence can be used in a method for diagnosing cancer in a patient. The telomerase can be used for detection, diagnosis and drug screening. Inhibitors of telomerase activity can be used to treat cancers such as melanomas, other skin cancers, neuroblastomas, breast carcinomas, cleukaemias, lymphomas, osteosarcomas or smooth muscle cell hyperplasias or skin growths. Enhancers of telomerase may be used to stimulate stem cells proliferation and differentiation (expansion of haematopoietic stem cells could be administered in the bone marrow transplant context). As well, many tissues have stem cells. Proliferation of these cells may be useful in wound healing, hair growth, treatment of disease such as wilm's tumour, organ regeneration or differentiation after injury or diseases, nerve cell or brain cell growth following injury.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      ö

```
This invention describes novel human CRT-1 genes and their encoded proteins containing a reverse transcriptase motif, which act as telomerase inhibitors. The gene, its encoded protein and derived antibodies can be used to provide base sequence information, detect telomerase activity and cancer cells, and to screen telomerase inhibitors. The detection method is simple and effective.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Novel gene, useful in detection of telomerase activity and cancer cells as well as screening telomerase inhibitors for treatment of

```
This sequence is a truncated human telomerase of the invention. Primers that amplify the telomerase coding sequence can be used in a method for diagnosing cancer in a patient. The telomerase can be used for detection, diagnosis and drug screening. Inhibitors of telomerase activity can be used to treat cancers such as melanomas, other skin cancers, neuroblastomas, breast carcinomas, colon carcinomas, leukaemias, lymphomas, osteosatroomas or smooth muscle cell hyperplasias or skin growths. Enhancers of telomerase may be used to stimulate stem cell proliferation and differentiation (expansion of haematopoietic stem cells could be administered in the bone marrow transplant context). As well, many tissues have stem cells. Proliferation of these cells may be useful in wound healing, hair growth, treatment of disease such as wilm's tumour, organ regeneration or differentiation after injury or diseases, nerve cell or brain cell growth following injury.
                                                                                                                                                                                                                                                                                                                                                  New isolated vertebrate telomerase genes - used to develop products for treating cancers or for organ regeneration, nerve cell or brain cell growth following injury or bone marrow transplantation
                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 4; Fig 11d-e; 134pp; English.

  The present sequence represents a human telomerase reverse transcriptase (hTRT) variant from the present invention. The present invention also describes the following methods: (A) determining whether a test compound is a modulator of hTRT, by detecting the change in hTRT recombinant protein or preparation of recombinant telomerase By contacting a protein preparation of recombinant telomerase By contacting a protein preparation of frecomplant telomerase By contacting a protein of the hTRT RNA or protein in a sample by binding a relevant probe to the sample and detecting the complex formed or in the case of RNA detection, amplifying the product and correlating the presence of complex or amplification product with presence of hTRT in the sample; and (D) increasing the proliferation of a vertebrate cell by increasing hTRT expression; and (E) the use of an agent that causes an increase in cell vertebrate cell proliferation to create a medicament that inhibite ageing. A protein preparation of hTRT and the polymoclectide encoding hTRT can be used in the manufacture of medicaments for inhibiting the effect of ageing or cancer. Inhibitors of telomerase activity can be used in that are associated with high telomerase.
                                                                                                                                                                                                                                                                                                               Pure and recombinant human Telomerase Reverse Transcriptase and its variants - are useful in the diagnosis, prognosis and treatment of cell proliferation conditions especially cancer and ageing
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       activity. -!- FUNCTION: THIS SMALL UBIQUITOUS ENZYME IS ESSENTIAL FOR MAINTENANCE AND CELL GROWTH.

-!- CATALYTIC ACTIVITY: ATP + AMP = ADP + ADP.
-!- SUBMIT: MONOMER (By similarity).
-!- SUBCELLULAR LOCATION: Cytoplasmic.
-!- SUMCELLULAR LOCATION: Cytoplasmic.
-!- SIMILARITY: Belongs to the adenylate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Match 66.9%; Score 93; DB 1; Length 1122; Local Similarity 75.0%; Pred. No. 1.5e-06; Les 18; Conservative 2; Mismatches 4; Indels

"Elimination of a major inhibitor epitope in factor VIII.";
J. Biol. Chem. 269:8659-8641 (1994).
-!- Biol. Chem. 269:8659-8641 (1994).
-!- PUNCTION: EACTOR VIII. ALONG WITH CALCIUM AND PHOSPHOLIPID, ACTS
AS A COPACTOR FOR PACTOR IXA WHEN IT CONVERTS FACTOR X TO THE
ACTIVATED FORM, FACTOR XA.
-!- SUBCELbullar LOCATION: Extracellular.
-!- SIMILARITY: Contains 3 F5/8 type A domains.
-!- SIMILARITY: Contains 2 F5/8 type C domains.
-!- SIMILARITY: STRONG, TO COAGULATION FACTOR V.

"Muscle-specific mRNA isoform encodes a protein composed mainly of the N-terminal 175 residues of type 2 Ins(1,4,5)P3 receptor.";

Biochem. J. 334:559-563(1998)

-- FUNCTION: RECEPTOR FOR INOSITOL 1,4,5-TRISPHOSPHATE, A SECOND MESSENGER THAT MEDIATES THE RELEASE OF INTRACELLULAR CALCIUM.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                DOMAIN: THE RECEPTOR CONTAINS A CALCIUM CHANNEL IN ITS C-TERMINAL BEXTREMITY. ITS LARGE N-TERMINAL CYTOPLASMIC REGION HAS THE LIGAND-BINDING SITE IN THE N-TERMINUS AND MODULATORY SITES IN THE LIGAND-PORTION IMMEDIATELY UPSTREAM OF THE CHANNEL REGION.

PTM: PHOSPHORYLATED ON TYROSINE RESIDUES (BY SIMILARITY).

MISCELLANBOUS: CALCIUM APPEARS TO INHIBIT LIGAND BINDING TO THE RECEPTOR, MOST PROBABLY BY INTERACTING WITH A DISTINCT CALCIUM-BINDING PROPER WHICH THEN INHIBITS THE RECEPTOR.

SIMILARITY: BELONGS TO THE INSP3 RECEPTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 ISOId=Q14571-2; Sequence=VSP 002699, VSP 002700;
TISSUE SPECIFICITY: THE SHORT ISOFORM IS FOUND IN SKELETAL MUSCLE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MIM; 600144; -.

Inositol 1,4,5-trisphosphate receptor type 2 (Type 2 inositol 1,4,5-trisphosphate receptor) (Type 2 InsP3 receptor isoform
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          reticulum.

DOMAIN: THE RECEPTOR CONTAINS A CALCIUM CHANNEL IN ITS C-TERMINAL EXTREMITY. ITS LARGE N-TERMINAL CYTOPLASMIC REGION HAS THE LIGAND-BINDING SITE IN THE N-TERMINUS AND MODULATORY SITES IN THE MIDDLE PORTION IMMEDIATELY UPSTREAM OF THE CHANNEL RESIOUS. PTM: PHOSPHORYLATED ON TRROSINE RESIDUES (BY SIMILARITY).

SIMILARITY: BELONGS TO THE INSP3 RECEPTOR FAMILY.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Rattus norvegicus (Rat).

"Genome sequence of Vibrio parahaemolyticus: a pathogenic mechanism

distinct from that of V. cholerae.",

Lancet 36:743-749(203).

Lancet 36:743-749(203).

- PUNCTION: This small ubiquitous enzyme is essential for

maintenance and cell growth.

- CATALYTIC ACTIVITY: ATP + AMP = ADP + ADP.

- SUBUNIT: Monomer (By similarity).

- SUBCELLULAR LOCATION: Cytoplasmic (By similarity).

- SIMILARITY: Belongs to the adenylate kinase family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Xenopus laevis (African clawed frog).

-!- FUNCTION: TELOMERASE IS A RIBONUCLEOPROTEIN ENZYME ESSENTIAL FOR THE REPLICATION OF CHROMOSOME TERMINI IN MOST EUKARYOTES. IT ELOMGATES TELOMERES. IT IS A REVERSE TRANSCRIPTASE THAT ADDS SIMPLE SEQUENCE REPEATS TO CHROMOSOME ENDS BY COPYING A TEMPLATE SEQUENCE MITHIN THE RNA COMPONENT OF THE ENZYME.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               PRINTS; PR01365; TELOMERASERT.
